First published in 1988 the Manual has become ever more useful with the rapid expansion of medical knowledge and the increasing time constraints associated with heavy patient-care responsibilities in modern health care settings. The 19th edition of the Manual is available in print and in portable format for the smart phone and tablet.

### *Kind of Information*

The Harrison's Manual of Medicine is a concise, fact-rich resource for bedside care, the Manual presents clinical information drawn from the 19th edition of HPIM, covering the key features of the diagnosis, clinical manifestations, and treatment of the major diseases that are likely to be encountered on a medical service. The purpose of the Manual is to provide on-the-spot summaries in preparation for a more in-depth analysis of the clinical problem. Another section "**Hematology and oncology**" in its chapters provides knowledge about the Examination of Blood Smears and Bone Marrow, Red Blood Cell Disorders, Leukocytosis and Leukopenia, Bleeding and Thrombotic Disorders, Myeloid Leukemias, Myelodysplasia, and Myeloproliferative Syndromes, Lymphoid Malignancies, Skin Cancer, Head and Neck Cancer, Lung Cancer, Breast Cancer, Tumors of the Gastrointestinal Tract, Genitourinary Tract Cancer, Gynecologic Cancer, Prostate Hyperplasia and Carcinoma, Cancer of Unknown Primary Site, Paraneoplastic Endocrine Syndromes, Neurologic Paraneoplastic Syndromes
